Building a Minimal Reflective Kernel

Stéphane Ducasse

Pharo is a clean, innovative, open-source, live-programming environment.

Building a minimal reflective kernel is a key to the realm of reflective architectures. It guides you through building a simple, self-described object-oriented reflective kernel inspired by the ObjVlisp model.

Including:

- Objects, object creation and instantiation
- Message lookup
- Inheritance and delegation
- Classes and metaclasses
- A self-described reflective model

Get it, it's open!
