

The Living Language and Environment

http://www.pharo.org

Pharo's goal is to deliver a clean, innovative, free open-source living object-oriented language and environment. By providing a stable and small core system, excellent developer tools, and maintained releases, Pharo is an attractive platform to build and deploy mission critical applications. Pharo focuses on developing a flexible and advanced infrastructure that can be used by SMEs (Small and Medium Enterprises) as well as researchers.

Pharo as an ecosystem

The goal of Pharo is to foster a healthy ecosystem of both private and commercial contributors who advance and maintain the core system and its external packages. In addition, Pharo wants to support a community of researchers in the domain of reengineering, language design, robotics and web development.

Pharo' forge

Pharo is not only a core set of packages but more than 300 projects developed by external contributors and we should build an infrastructure to control the quality of the production.

It contains around 900 projects, 700 users and 90000 packages.
